

CLAIMS

I claim:

1. A method comprising:
determining call information associated with an incoming call; and
organizing said call information into an address book program.
2. The method of claim 1 wherein part of said call information is a start time, a finish time, a date, a phone number, or a name.
3. The method of claim 1 further comprising updating a phone number associated with a name already stored in said address book program with a new phone number comprising a portion of said call information.
4. The method of claim 1 wherein part of said call information is received from a timer, a clock, a calendar, or a caller identification device.
5. The method of claim 1 further comprising organizing said call information into a phone log.
6. The method of claim 1 wherein part of said call information is a call type selected from a group consisting of a sent call, a received call, a missed call, a personal call, and a business call.

7. The method of claim 1 wherein organizing said call information includes organizing call information in an address book program entry according to a call type selected from a group consisting of a personal call, a business call, a last call sent, a last call received, and a last call missed.
8. The method of claim 1 further comprising indicating missing call information with a missing call information identifier.
9. The method of claim 1 wherein said call information received is associated with a call initiated by a caller by selecting a name from said address book program.
10. A method comprising:
determining call information associated with an incoming call; and
organizing said call information in a calendar program entry.
11. The method of claim 10 further comprising accessing an address book program to associate a phone number with a name.
12. The method of claim 10 wherein a portion of said call information is a start time, a finish time, a date, a phone number, or a name.

13. The method of claim 10 wherein a portion of said call information is received from a timer, a clock, a calendar, or a caller identification device.
14. The method of claim 10 further including organizing said call information into a phone log.
15. The method of claim 10 further including indicating missing call information with a missing call information identifier.
16. The method of claim 10 wherein said call information includes call type selected from a group consisting of a sent call, a received call, a missed call, a personal call, and a business call.
17. The method of claim 10 wherein organizing said call information includes organizing call information in a calendar program entry according to a call type selected from a group consisting of a personal call, a business call, a last call sent, a last call received, and a last call missed.
18. The method of claim 10 wherein said call information received is associated with a call initiated by a caller by selecting a name from an address book program.
19. A machine-readable medium that provides instructions, which when executed by a processor, cause said processor to perform operations comprising:

determining call information associated with an incoming call; and
organizing said call information into an address book program.

20. The machine-readable medium of claim 19 wherein part of said call information is a start time, a finish time, a date, a phone number, or a name.

21. The machine-readable medium of claim 19 further comprising updating a phone number associated with a name in said address book program.

22. The machine-readable medium of claim 19 wherein part of said call information is received from a timer, a clock, a calendar, or a caller identification device.

23. The machine-readable medium of claim 19 further comprising organizing said call information into a phone log.

24. The machine-readable medium of claim 19 wherein part of said call information is a call type selected from a group consisting of a sent call, a received call, a missed call, a personal call, and a business call.

25. The machine-readable medium of claim 19 wherein organizing said call information includes organizing call information in an address book program entry according to a call type selected from a group consisting of a personal call, a business call, a last call sent, a last call received, and a last call missed.

26. The machine-readable medium of claim 19 further comprising indicating missing call information with a missing call information identifier.

27. The machine-readable medium of claim 19 wherein said call information received is associated with a call initiated by a caller by selecting a name from said address book program.

28. A method comprising:
 identifying call information transmitted with an incoming call; and
 attempting to match said call information with contact information stored in an address book program.

29. The method as in claim 28 further comprising:
 storing said call information in said address book program if no match to said call information is located in said address book.

30. The method as in claim 29 further comprising:
 updating an address book entry with said call information if a match to said call information is located in said address book.

31. The method as in claim 30 wherein said call information comprises a caller's name and current telephone number.

32. The method as in claim 31 wherein updating comprises:
supplementing said address book entry with a new telephone number transmitted with said incoming call.
33. The method as in claim 31 wherein updating comprises:
replacing a number in said address book entry with a new telephone number transmitted with said incoming call.
34. The method as in claim 32 wherein supplementing comprises:
classifying said new telephone number in said address book entry as a most recent received call from said contact.
35. The method as in claim 32 wherein supplementing comprises:
classifying said new telephone number in said address book entry as an “unknown” type of number.
